Floor Cleaner with Reduced Slip Additive

Be sure to get your floors deep down clean, with the innovative formulation of **CLEAN 'N SURE**.

This bio-based formulation is Earth Smart® Certified, indicating it is safer in use for both the user and the environment. A specially formulated combination of chemistry and biology utilizes high performance microorganisms (20 billion CFU/gal), nutrients, biological enhancers and surfactants to provide accelerated degradation of organic materials that build up on floor surfaces over time.

CLEAN 'N SURE:

- Saves time, money and reduces hazards.
- NPE-Free
- VOC-Free
- Contains no OSHA hazardous ingredients.
- Emulsifies both trans fat and trans fat-free greases.
- Biologicals continue to degrade organic matter embedded in porous areas and grout even after the washing is complete.
- Deodorizes with light lemon fragrance.

CLEAN 'N SURE saves time, water and money, while reducing slip hazards.

This formula **provides a no rinse solution**, saving time for your staff and reducing water consumption – both of which add up to cost savings.

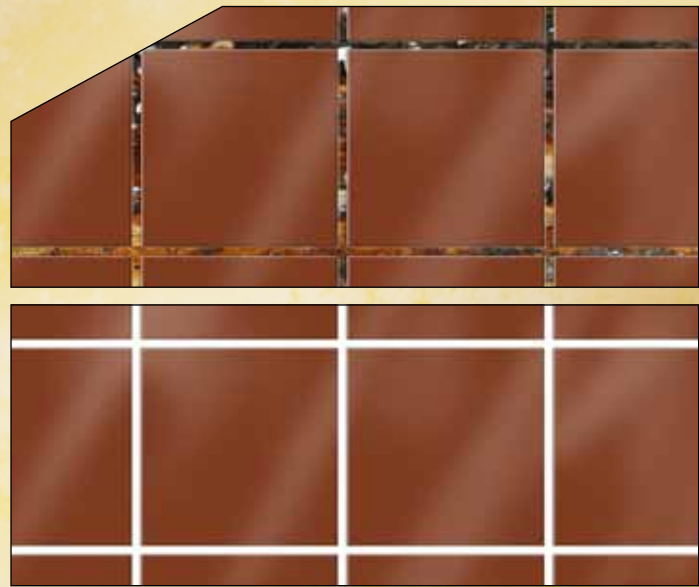

The reduced slip additive **provides added traction to flooring** after the floor has dried, which helps prevent slipping accidents during the normal day. Fewer accidents is another cost savings you can count on.

CLEAN 'N SURE

Provides a 2-Pronged Approach to Cleaning and Safety

CLEAN 'N SURE's innovative formula cleans and digests grease and soil build-up on flooring 2 ways:

1. Biological enhancers and surfactants accelerate degradation of organic materials on the floor surface to provide a clean floor surface.
2. Residual action of beneficial microorganisms continues to break down and digest the greases and soils that have been long embedded in porous areas and grout, even after the floor has dried. This residual action also helps to digest new deposits as they occur.

CLEAN 'N SURE works to reduce slipping hazards in 2 ways:

Over time grease and soils will build-up in porous areas of flooring and in grout. This build-up then creates a slipping hazard making accidents more likely. Using **CLEAN 'N SURE**:

1. Reduces the slipping hazard by digesting the grease and soils as noted above.
2. The reduced slip additive in the formula leaves the floor with added traction, to help prevent accidents that can lead to injury.

Ideal for use on flooring that is not damaged by water, like:

- Quarry Tile
- Ceramic Tile
- Porcelain Tile
- Cement Flooring
- Linoleum

Use in:

- Commercial Kitchens
- Cafeterias
- Restaurants
- Entryways
- Universities
- Nursing Homes
- Hospitals
- Schools
- Mess Halls

CLEAN 'N SURE:

Cleans your floors and keeps you sure-footed as you walk upon them after they've dried!
