

UNITED 139

DRY SPRAY

LUBRICANT

is the perfect lube for any sticky situation!

United 139 is the toughest dry lubricant ever developed because it contains an extremely fine fluorotelomer powder with outstanding microscopic film-forming properties—so it actually provides a tiny film layer to protect parts from harmful friction.

United 139 is colorless, odorless when dry and stainless, yet more slippery than silicone oils.

United 139 works great on:

- Drawers
- Hinges
- Springs
- Chain drives
- Pulleys
- Machinery
- Leather
- Plastic
- Metal
- Wood
- Glass
- Paper
- And other smooth surfaces.

United 139 is the perfect heavy-duty release agent, because it provides very efficient lubrication without the dangers and inconveniences of oily silicone or messy graphite.

United 139 retains its lubricating properties at extreme temperatures from -100°F (-73°C) to over 500°F (260°C), and withstands flushing with water or solvents.

United 139 is more slippery than silicones or graphite, yet far more efficient to use in any application!
