**DISSOLVES PLASTER, LIME & CAST RESIDUE IN DRAINS AND TRAPS.
CREATES NO OFFENSIVE FUMES.**

United 977 ESA CAST AWAY is designed to unclog drains where plaster residue from cast-making or barium sulfate from gastrointestinal radiography (fluoroscopy) causes slow-running drains.

DIRECTIONS:

As a regular maintenance program **ESA CAST-AWAY** can be injected daily in adjustable doses, according to individual need, using a United A855 Peristaltic Metering Pump. For slow running sink drains where plaster or barium is discarded or mixed, put 8-16 oz. of **United 977** down the drain. Allow to work for 5-10 minutes then follow with a hot water flush for 2-3 minutes. For a neglected drain that has become slow-moving, add 16-32 oz. of **United 977**. Wait overnight. Flush with hot water for 4-5 minutes. Should the drain be producing a putrid odour, put 16 ounces United 894 ZYME-OUT in the drain and initiate the injected system for regular treatment using **ESA CAST-AWAY**. **ESA CAST-AWAY** will greatly reduce or eliminate the need to clean out these traps in most cases.

MAINTENANCE: 4-8 oz. weekly or as needed when drains are running slow. Always apply at night for best results.

DO NOT MIX United 977 WITH OTHER CLEANERS OR CHEMICALS. Toxic fumes may be formed.

It is good practice never to mix cleaners with other chemicals, as adverse chemical reactions can sometimes occur. Dilute **United 977** with water only.

This product is not intended for use in food preparation areas. Avoid contamination of food in the application of the product.
